Lawn Bowls Score Board

Consisting of 8 individual panels which can be placed together or separately at the ends of

Each unit wirelessly communicates to the Bowls server to show rink scores, ends and totals. Custom home and away names show, and if longer than 5 characters, they will scroll through the addition letters and repeat.

Scores can be updated with a touch screen built into the panel itself. Handy if the remote is not available.

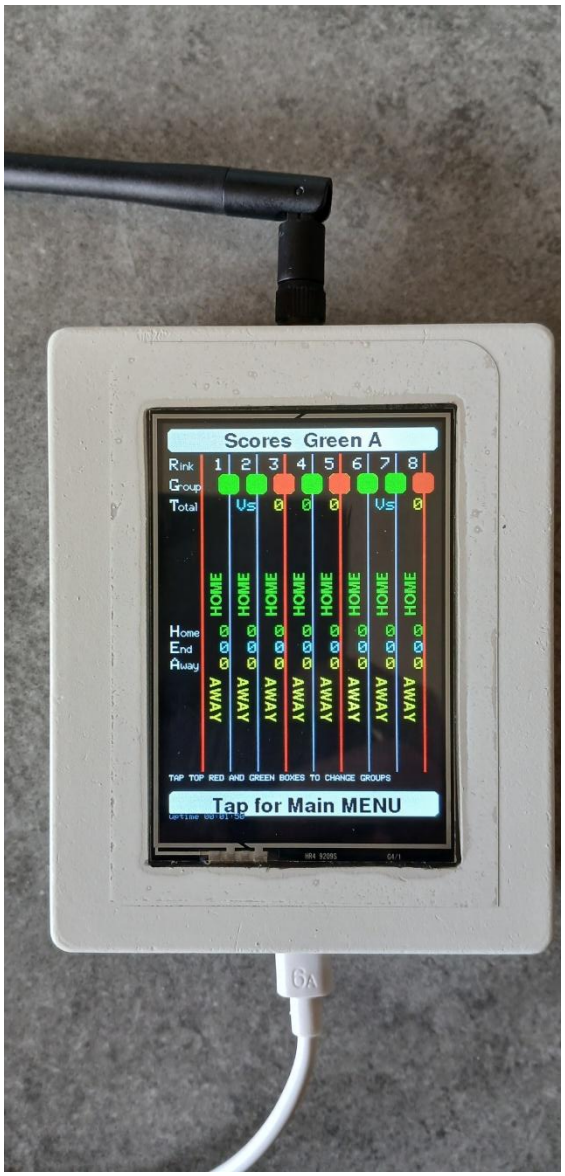

They are weather resistant.

(note: The layout of display is different than pictured. It will be Totals up top, then Rink Numbers then Home, Ends & Away).

Each unit has a standard 240v plug and can be individually turned off if not in use.

Measurements approx. 1325mm H x 345mm W x 50 to 75mm D

Bowls Server

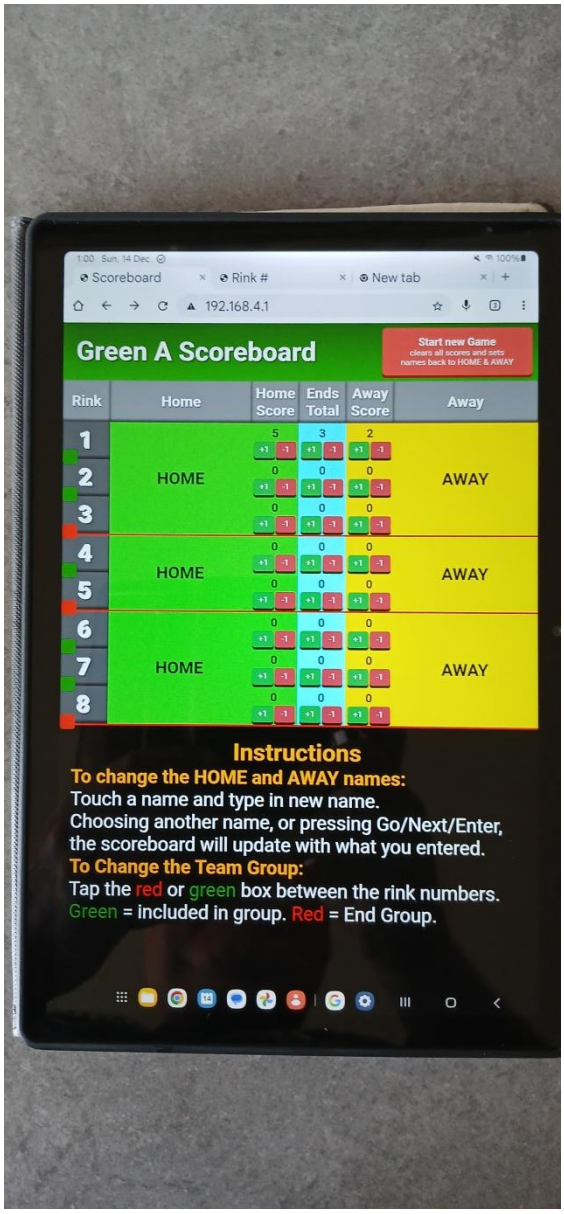

This is the main unit that keeps the scores, sends information to the score panels and receives score updates from remotes.

This is all done wirelessly.

It is also a web server that devices can connect to. Thus allowing you to show and configure information like team names and groups with a user friendly device like a phone or tablet.

Note: should be in the open or at least not in a metal housing that may restrict WIFI communication. Unit is weather resistant.

Tablet/Pad

The tablet will be the main unit for entering team names and configuring the team groups. I.e. how many rinks for a pennant team.

In the example we have 3 teams.

The first one playing on rinks 1,2 &3.

The Second team playing on rinks 4 & 5, and

the third team playing on rinks 6,7 & 8.

This is a standard Android tablet that connects to the Bowls Server hot spot and opens up a web page which is what you see in the example.

Scorers

These are mini touch screen units which allow the player to update the scores. Firstly a rink is chosen and then you score for that rink by touching the Home Ends or Away Score to add 1 to the rinks score each time you touch it or -1 if you press the -1 beside it. It will stay on that rink until change is selected to choose another rink.

This allows any scorer to work with any rink.

Custom Home and Away names can be entered which is displayed on the scoreboard.

The dock station allows ease of charging by simply dropping it in.

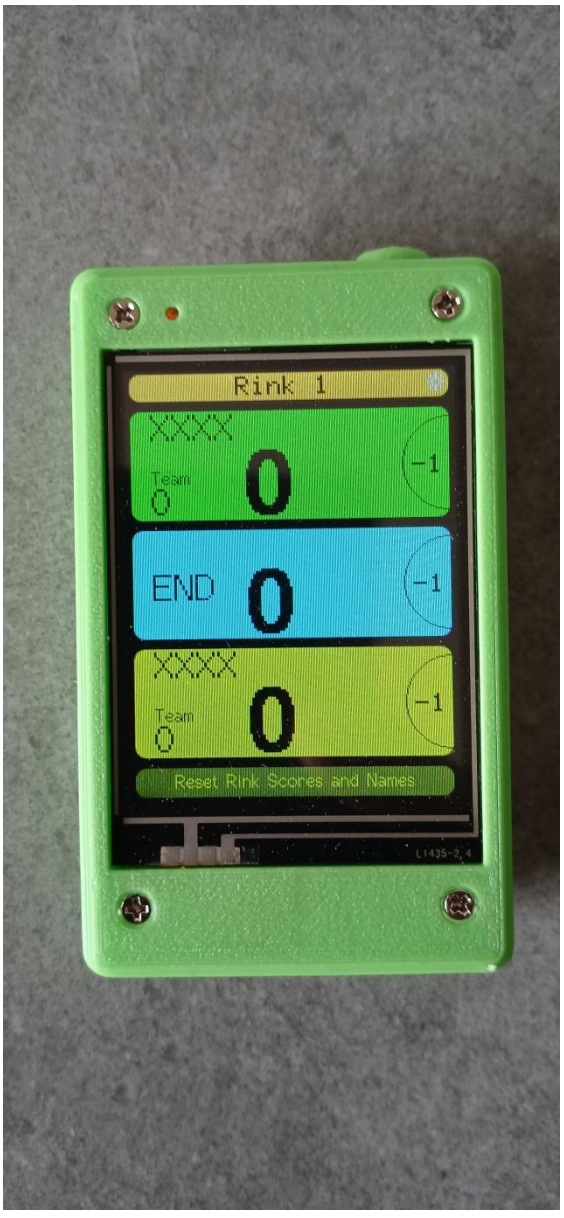

Scorers (Optional)

These are the older model replaced by the small touch screen units. Configured just for one rink.

The unit on the right is what is used in the score panel itself which has a touch screen for updating scores.

TV Scores (Optional)

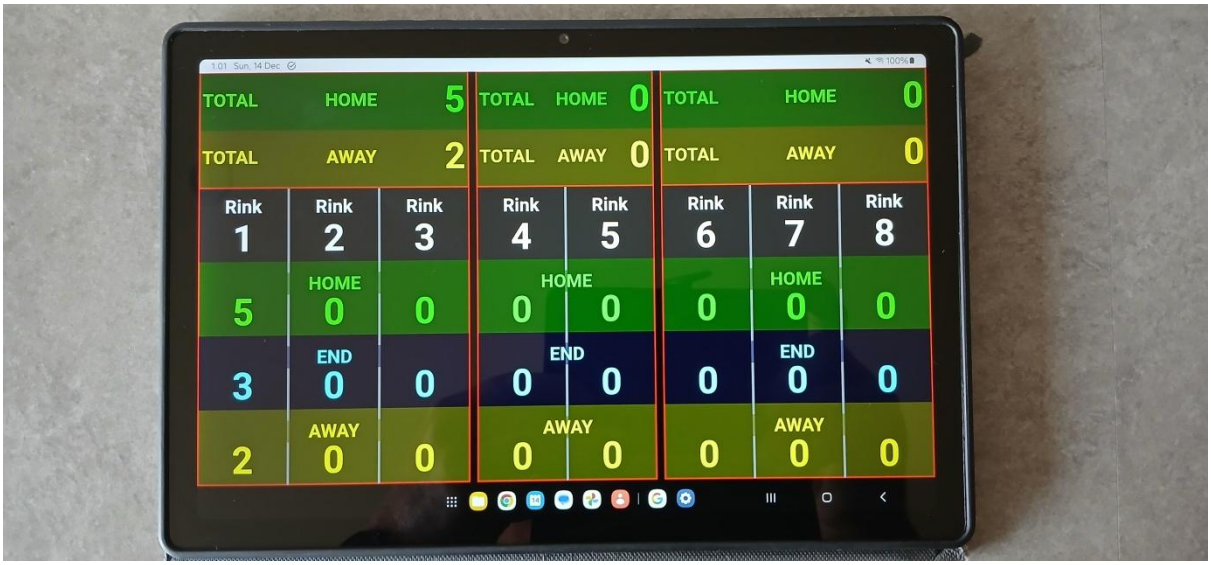

This connects to the HDMI port on a TV screen and communicates wirelessly to the Bowls Server.

It shows the entire scoreboard in live time. (Supports one green at a time)

(Once configured, the keyboard isn't required)

Example of what is displayed on TV

What's included for each Green:

8 x Individual Score Panels (Preconfigured)
1 x Spare Panel
9 x Mounting brackets sets
1 x Bowls Server with USB Power Supply
10 x Touch Screen Scorers
1 x Charging Dock
1 x 10" Android Tablet $12,000

Options

TV Scores unit	$300
10 x Older scorers with charge dock (either style)	$1800
Extra tables	$150
Extra remote scorers	$130

Notes:
Stands not included for panels.

Although the score panels are weather resistant, they do have vents and water cannot be sprayed into them or they will get damaged. They are OK in the rain.

The power plugs, docks, remotes tablets and USB power packs should be kept out of the weather as they don't like getting wet.

Prices do not include GST, as I am not registered for GST. You will get an invoice, but not a Tax invoice.
